FT NavVision™ A Unique Monitoring and Control system

Fail-safe Computer System Replaces Ship Instruments

FT NavVision™ integrated software and hardware modules consolidate ship's navigation instruments, autopilot, switch/alarm panels, engine sensors, generators, pumps, tank levels and electrical systems into fail-safe, interactive virtual instrument displays.

Because safety is your no. 1 issue –

FT NavVision display systems have been designed to be non-stop, and completely fail-safe. FT NavVision uses two computers, and redundant network architecture. This means that the cabling can be interrupted at any point and/or one computer can fail, without this having any effect on continued operation of the system. When the going gets tough - FT NavVision is completely fault tolerant and reliable.

Over 800 vessels (Large and small) have installed and rely on FT NavVision virtual instrument technology on a daily basis.

FT NavVision is one of the most cost effective systems you can buy – at a refit, or installed on a new boat - Each FT NavVision module can be used stand-alone or in combination with others. FT NavVision works with existing instrument sensors and equipment.

Find out how little it costs to own the best. Contact us for a free quotation.
